McCabe Environmental Services, L.L.C.

Client: Empowerment Academy Charter School – 240 Ege Ave – Lead in Drinking Water Testing

Date: 09/18/2024

1.0 INTRODUCTION

McCabe Environmental Services, L.L.C. (McCabe) was retained by Empowerment Academy Charter School to conduct lead in drinking water testing at 240 Ege Avenue, Jersey City, New Jersey 07304.

The project information is as follows:

<u>Client Name</u>: Empowerment Academy Charter School

Contact Person: Mr. Bobby Seetaram

<u>Project Name</u>: Empowerment Academy Charter School

<u>Project Location</u>: 240 Ege Avenue

Jersey City, New Jersey 07304

<u>Date(s) of Service</u>: August 23, 2024

McCabe Personnel: Gerard D'Alessio

2.0 SCOPE OF WORK

Drinking water testing was performed at Empowerment Academy Charter School located at 240 Ege Avenue, Jersey City, New Jersey on August 23, 2024. The purpose of the testing was to determine if the building's plumbing was having an adverse impact on water quality, specifically with regard to lead concentrations. Samples were collected from various potential drinking water outlets located throughout the building.

3.0 PROCEDURES

After determining which outlets would be sampled, McCabe personnel collected a "first draw" sample at each location. A "first draw" is the initial water that is first to come out of the tap after a period of inactivity. Following the "first draw", a "30 second flush" sample was also collected where the main service line comes into the building. All samples were collected into 250 mL sterile bottles, labeled with a sample identification, and analyzed in accordance with EPA approved methods to determine the level of lead in drinking water. Samples were analyzed by an accredited laboratory.

The U.S. Environmental Protection Agency (EPA) has established National Primary Drinking Water Regulations (NPDWR) that set mandatory water quality standards for drinking water contaminants. These are enforceable standards called "maximum contaminant levels" or "MCL", which are established to protect the public against consumption of drinking water contaminants that present a risk to human health. An MCL is the maximum allowable amount of a contaminant in drinking water which is delivered to the consumer.

The EPA has established the Lead and Copper Rule that sets standards for state and public water systems. This rule has set an MCL for lead at 15 parts per billion (ppb) for a one-liter sample. However, the EPA also established the Lead in Drinking Water at Schools and Child Care Facilities in which the EPA recommends an MCL of 20 ppb for a 250 milliliter first draw sample. In order to be more stringent, for our report purposes we have compared all results to both the 15 ppb and the 20 ppb standards.

MES Project No.: 24-04982

MES Project No.: 24-04982 Client: Empowerment Academy Charter School - 240 Ege Ave - Lead in Drinking Water Testing Date: 09/18/2024

4.0 TABLE OF SAMPLE RESULTS

The following table presents all sample results in order of sample identification:

Sample ID	Sample Location	Lead Result	Exceeds (MCL 15 ppb)	Exceeds (MCL 20 ppb)
EA-01	Basement Cafeteria Kitchen Sink	1	Pass	Pass
EA-02	1st Floor Hallway Water Fountain	< 0.5	Pass	Pass
EA-03	2 nd Floor Hallway Water Fountain	<0.5	Pass	Pass
EA-04	3rd Floor Hallway Water Fountain	2.3	Pass	Pass
EA-05	Basement Water Fountain	< 0.5	Pass	Pass
EA-06	Basement Slop Sink	7.5	Pass	Pass

5.0 **DISCUSSION AND CONCLUSION**

A total of six (6) samples were collected from Empowerment Academy Charter School. All samples were found to be less than the EPA Lead in Drinking Water at Schools and Child Care Facilities standard of 20 ppb, as well as the EPA Lead and Copper Rule standard of 15 ppb.

In addition, McCabe Environmental recommends annual drinking water sampling to ensure that the building's plumbing is not having an adverse impact on water quality.

Sample ID#s: CR48319 - CR48324

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis/Shiller

Laboratory Director
